

# Central Mountain Wetland

*Clinton County, Pennsylvania*

BluAcres, LLC (BluAcres) provided technical services to the Keystone Central School District to design and construct an educational wetland on their Central Mountain School property in Clinton County.

The Keystone Central School District's plans were to utilize the current project site for construction of a ball field and other recreational facilities. Those plans were diminished when they realized that wetland regulations would limit the school's ability to develop the field.

Instead of viewing the wetland as a limitation, the school staff took a more optimistic approach and viewed the degraded wetland as an opportunity.

With a renewed vision, the school officials began enlisting the assistance of local professionals including BluAcres, LLC to assist them in developing a unique educational opportunity.

BluAcres, LLC designed, secured funding, provided construction over site, and planting services for the project. The restored wetland ecosystem is providing the School District with an outdoor classroom for the public and students to learn about the importance of wetlands.

Project Contact: Keystone Central School District  
95 West 4<sup>th</sup> Street, Lock Haven, PA 17745

The Project was completed in August, 2009.
