

# RAYSTOWN LAKE - VEGETATION STUDY

*Huntingdon County, Pennsylvania*

BluAcres, LLC (BluAcres) provided technical services for the U.S. Army Corps of Engineers at Raystown Lake to gather plot and transect level vegetation data, complete GIS data collection and analysis, and provide a final summary report for a Vegetation Forage Study at the Raystown Lake Project located in Huntingdon County Pennsylvania.

Collection of Field Data

The vegetation forage study consisted of collecting three data sets.

1. Collecting growing season vegetation data by completing 180 growing season vegetation plots in 18 forest compartments.
2. Collecting regeneration and plant diversity data by completing plot sets within and outside existing fenced deer enclosures.
3. Collecting post-growing season browse data by completing plots along 13 transect lines.

The project was awarded in July 2009 and completed in February 2010.
